

LIEPĀJAS RAJONA KOKI UN KRŪMI

Maija Bice, Dzintra Knape, Dagnija Šmite, Ināra Bondare

Nacionālais Botāniskais dārzs, Dendrofloras nodaļa, Miera iela 1, Salaspils, LV- 2169
e-pasts: nbd@latnet.lv

Darbā apkopotas ziņas par Liepājas rajonā 402 objektos konstatētajiem 87 savvaļas un 753 introducētajiem koku un krūmu taksoniem. Minētas atradnes, doti koku izmēri.

Atslēgas vārdi: vietējās sugas, svešzemju sugas, koki un krūmi, Liepājas rajons.

IEVADS

Pēc ilgāka pārtraukuma šajā izdevumā turpinām rakstu sēriju par Latvijas administratīvo rajonu dendroloģiskajiem objektiem. Materiāli (kas sākotnēji bija domāti iecerētajai monogrāfijai par Latvijas dendrofloru) vākti pēc bijušā Nacionālā botāniskā dārza Dendrofloras nodaļas vadītāja Raimonda Cinovska (1930-1998) metodes.

Inventarizēti visi zināmie dendroloģiskie stādījumi: pilsētu un lauku (arī bijušie muižu, pusmuižu un mācītājmuižu) parki, kapsētas, kokaudzētavas, meža kultūras, ceļu apstādījumi, privātas kolekcijas u.c. Sīkāk pētīti arī dižkoki un aizsargājamās savvaļas koku un krūmu sugas.

Līdz šim izdoti materiāli par Alūksnes un Balvu, kā arī Bauskas, Cēsu, Daugavpils, Dobeles, Gulbenes, Jelgavas, Jēkabpils, Krāslavas un Kuldīgas rajona parku un apstādījumu kokiem un krūmiem, kas apkopoti atsevišķās brošūrās.

Liepājas rajonā inventarizēti 402 objekti. Plašākie pētījumi veikti 1977 – 1978 gadā (R. Cinovskis, M. Bice, Dz. Knape, D. Šmite u.c.), kā arī 1983. gadā (R. Cinovskis u.c.). Valsts nozīmes aizsargājamie objekti inventarizēti atkārtoti no 1991 - 1995 gadā (M. Bice, I. Bondare, Dz. Knape). No 1995. gada līdz 2000. gadam īpaša vērība veltīta efejas, skābarža un īvjes savvaļas atradņu inventarizācijai, kā arī kultivēšanas vietu uzskaitēi atradņu tuvumā (R. Cinovskis, I. Bondare). Visvairāk savvaļas īvjes un Baltijas efejas atradņu ir Nīcas un Rucavas pagastā, Luknā ir skābarža audzes. Šajā darbā nav iekļauti dižkoki, ārpus pētītajiem dendroloģiskajiem objektiem.

Pēdējos gados ir notikušas lielas izmaiņas rajona dendroflorā. Tas saistīts galvenokārt ar privātajām kolekcijām; dažām mainījušies īpašnieki, kas mazāk rūpējas par koku un krūmu sortimentu, vienlaikus veidojas jauni daiļdārzi ar bagātīgiem stādījumiem.

Sadarbojoties Rucavas pagasta padomei un NBD Dendrofloras nodaļai, 1998. gadā sāka arboretuma veidošana Rucavā. Līdz 2002. gada rudenim Rucavas pagastā iestādīti 578 kokaugu taksoni. Jaunie stādījumi veidoti Rucavas muižas kalnā, Rucavas centrā un pie skolas dabīgā mežā. I. Graudiņa kolekcija Grobiņā pārtapusi par privāto botānisko dārzu, Liepājas mežniecības kokaudzētava - par privātu kokaudzētavu "Īves", ap ēkām izveidota bagātīga skujkoku kolekcija, interesanti stādījumi ir arī citviet.

Darbā apkopotas ziņas par Liepājas rajonā 402 objektos konstatētiem 87 vietējo un 753 introducēto koku un krūmu taksoniem (sugas, pasugas, varietātes, formas, šķirnes).

Minētas atradnes, dots koku skaits un izmēri (diametrs un augstums, kā arī perimetrs, ja diametrs pārsniedz 1 m).

Lietoti šādi saīsinājumi (alfabētiskā secībā): a. – aleja; apst. – apstādījumi; atv. – atvases; bij. – bijušais; cv. – šķirne; fragm. – fragments; kv. – kvartāls; m. – māja; m.m. – mācītājmāja (mācītājmuiža); mežn. – mežniecība; n – daudz; p. – parks; pag. – pagasts; stād. – stādījumi.

Pirms kokaugu saraksta dots Liepājas rajona dendroloģisko objektu (402) alfabētiskais rādītājs. Norādīts vietējo un introducēto taksonu skaits objektā. Aiz objekta nosaukuma – inventarizācijas datums.

Autori cer, ka šī publikācija palīdzēs vietējo un svešzemju sugu izplatības un introducēto sugu aklimatizācijas iespēju precizēšanā Baltijas jūras piekrastes reģionos.

Trees and Shrubs of the Liepāja Region

Maija Bice, Dzintra Knape, Dagnija Šmite, Ināra Bondare

Summary

Keywords: indigenous species, exotic species, trees, shrubs, Liepāja region

The inventory of indigenous and exotic tree and shrub species in the Liepāja region was carried out in 1977 – 1978, in 1983 and in 1991 – 2000, totally on 402 sites as urban and rural parks (including the parks of the one-time landed estates), cemeteries, tree nurseries, in forests, on the roadsides, in private collections. The given work sums up data for 87 indigenous and 753 exotic tree and shrub taxa (species, subspecies, varieties, forms, sorts). In the list of taxa there are indications as to the site the respective taxon is found, number of specimens, and the dimensions for the biggest specimens.
